Projects
Ski and Snowboarding App (snowboard.danielbolognino.com)   **March 2017**
- Uses Express.js on the backend and Angular.js on frontend, JWT for user authentication, plus geolocation to allow user to find mountains within a certain radius
- Built a REST API with all 300+ ski resorts in the U.S. which data is pulled from
- HTTP requests are properly handled and routed on the backend
- Client-side routing implemented in order to reuse DOM elements

S.K.A.T.E. App (skate.danielbolognino.com)   **March 2017**
- Applied to agile/scrum principles to collaborate on this application
- Built a prototype using Node.js as a proof of concept
- Used JWT for user authentication due to the ease of processing JWT cross-platform on the client-side
- Used the bcrypt hashing function on the backend when making requests to the server
